

## The Wild Neighbors Database Project

We design and develop online data management systems to empower wildlife professionals and advance One Health.

The Wild Neighbors Database Project is a US 501(c)3 non-profit organization which promotes international wildlife rehabilitation by developing online data management software and helping implement its use worldwide to gather and exchange wildlife data.

Since 2012, the Project has provided Wildlife Rehabilitation Medical Database (WRMD) to wildlife rehabilitators for free. It is currently used by over 1,000 organizations around the world and contains over 2.5 million records.

# Oil Spill Extension Features

**Designed for each stage of oiled wildlife response**

## Processing

A critical component of oiled wildlife response is collection of data about the contaminant and how it has impacted patients. The processing module contains fields with standardized options for oiling percentage, oiling depth, location and type. This module also contains an easy upload feature for evidence photos.

## Wash

Wash module fields can capture all aspects of the cleaning process, including pre-treatments, detergents, type of wash, wash team members and the duration of each step.

## Conditioning

The conditioning module provides an easy way to record conditioning notes using fields for buoyancy, preening and grooming behaviors, use of haul-outs, and feeding and waterproofing notes.

## Quick event deployment

The oil spill extension saves frequently used settings in a master account for quick and easy deployment during a response.

# Working Together For Wildlife

The Wild Neighbors Database Project created Wildlife Rehabilitation Medical Database (WRMD), and continuously manages and updates it, providing it for free to wildlife rehabilitators around the world.

Due to the need for a first-rate wildlife medical database dedicated to oil spill response in California, The Wild Neighbors Database Project and the Oiled Wildlife Care Network (OWCN) partnered to develop an oil spill-specific version of WRMD called OWRMD. Through financial backing and expertise in oil spill response, the OWCN provided the foundation for this new base. OWRMD has significantly enhanced wildlife data collection in California spill responses; however, state-specific requirements integrated into this base have limited its applicability for use outside of California.

Fast forward to twelve years later, when, through funding from Focus Wildlife, the vision of creating a version of OWRMD available to oil spill responders around the world has now been brought to life. The Wild Neighbors Database Project took the OWRMD database and adapted it, developing a brand new Oil Spill Extension, which will soon be available to all responders!

# Saving Time to Save Lives

## Realtime online record keeping

- Requires only Wifi/cellular connection, a computer or mobile device for data entry
- Reduces the need for paper patient records
- Promotes data integrity with drop-down lists
- Analyzes data for real-time feedback
- Provides remote access to data

## Saves time to help save lives

- Reduces time spent managing paper records
- Generates reports with the click of a button, including: animal logs, processing summaries, rechecks, prescriptions, husbandry, and custom reports

## Standardizes & organizes

- Contains built-in spill-specific data fields
- Uses standardized fields, allowing multiple organizations to analyze combined data
- Delivers organized, easily analyzed data, providing big-picture and patient-specific information

## Affordable

- One-time activation fee = \$500
- No further charge until the extension is used during a response, then \$1/per patient
